† The TCNA does not rate products for exterior floors. Project specifier must determine product suitability for exterior floor applications by evaluating specific project conditions, type of use, traffic, drainage, expected contaminants (such as water, oil, grease, etc.), wear, maintenance, and manufacturer's specifications and guidelines. Use caution--product may not be suitable for pool decks or ramps. No polished tiles; only textured surfaces may be suitable.

Since travertine is a capillary filled stone, foot traffic or high pressure items may expose these voids. To remedy, seal the surrounding area and fill the hole with sanded or epoxy grout in a color that matches the stone. Then re-seal the stone.

Merchandising materials and samples are for general reference only and representative of a product's potential characteristics. Natural stone has inherent variation in color/shade, size, texture, finish, veining, grain, movement and pitting. Blend tiles from different boxes to achieve consistent shade distribution. Installer and end user must conduct a dry mock layout under proper lighting conditions to inspect the product. Installation constitutes product acceptance. Ensure proper installation, application, use, care and maintenance. Natural stone must be sealed prior to installation. Do not use aerosol catalyst adhesives. Only use pH neutral cleaners. Natural stone may experience changes in color and finish if installed in an exterior application. There is no warranty for natural stone. Reference the TCNA Handbook and ANSI for installation guidance. Please visit bedrosians.com for current product information. We reserve the right to make product changes at any time without notice.
